

National Notebook Contract Pricing Guide for Tablet PCs, July 05

Tablet PC Buying Guide

The Tablet PC does everything that your PC or Notebook does, without requiring all the usual input devices, making it instantly more flexible and more natural to use. Its portability surpasses even the standard notebook design, forming a powerful mobile solution. There are a whole host of advanced features that make up the Windows XP Tablet edition; the following are just some of them:

- **Tablet PC Input Panel**
Input Panel is an on-screen keyboard and writing pad that lets you input text into applications (including Outlook, Word, Excel and PowerPoint) using your own handwriting. It also gives you the option to call up the on-screen keyboard which you tap using the Tablet's digital pen.
- **Microsoft Windows Journal**
Windows Journal turns your Tablet PC into a digital writing pad. Notes can then be taken directly onto your Tablet PC, so you don't have to enter them into your computer later.
- **Microsoft Reader**
Read and annotate electronic texts during study or discussions. MS Reader is included with your Tablet PC; books can be easily downloaded from online bookshops.
- **Advanced handwriting recognition / conversion**
Flexible handwriting technology allows you to convert handwritten notes to text when want a formal, typed result. Alternatively, you can save your handwritten notes in Microsoft's Digital Ink format and you can search for words within your handwritten work, just as you would if it was text.
- **Document annotation**
You can annotate directly onto documents with the Tablet PC digital pen - letting you mark up articles and assignments with your comments before they are sent. Include hand drawn sketches, diagrams and drawings quickly and easily to any assignment.

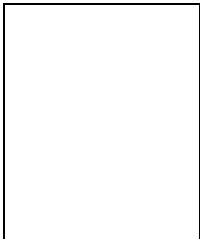

Points to Consider

- All Tablets include a 1-year collect and return warranty
- Carry cases for the Study Buddy and Teacher Tablet need to be ordered separately
